

PILOT YOUR PROTEINS FROM DISCOVERY TO PRODUCTION

- Gather on a single platform the sequences and all data of protein batches.
- Monitor and control your antibody selection process.
- Coordinate all your operations in real time.

START WITH OUR PANEL OF MODULES AND ADAPT THE SOLUTION TO YOUR NEEDS

● **DESIGN**
your proteins according to any format, including multi-specific antibodies.

● **FIND**
the history of your batches : plasmids, sequences, proteins, production host,....

● **IDENTIFY**
parental clones, clusters, homologies among your antibodies.

● **MONITOR**
the stock levels of your protein batches to plan a new production.

+
Our team is at your disposal, with 25 years of experience in protein production for R&D.

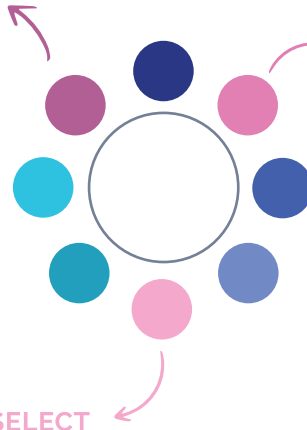

+
We understand your peculiarities and quickly bring ad-hoc solutions.

+
A personalized follow-up of your teams.

OUR EXPERT MODULES FOR AN END-TO-END SOLUTION

YU-PROTEIN

Registration of Biologics (antibodies, fusion proteins, VHH). Includes protein design, feature analysis and comparison with the expected format.

YU-PRODUCE

Management of biological production processes. Proteins and cell batches can be described: expression system, expression conditions, purification steps, formulation. Characterization assays can be included.

YU-SELECT

Gathers all the results of your antibody selection campaigns : ELISA tests, clone sequencing... Provides an overview of all data to help you select the best antibodies.
